

25 May 2019

Initial Work on Scheme Tracker. It is designed for domestic and commercial use. Examples of domestic uses include replacement of kitchen taps in the house and installation of garden lighting in the house. Examples of commercial uses include a new sports hall for the school and the construction of the Ely Southern Bypass.

Scheme Tracker is designed to monitor schemes. It has a comment field. Users can comment on what works have been done and what needs doing. For example, the building works have been complete, it needs to comply with Health and Safety Regulations. If the scheme is complete, users can post feedback in the comment field with recommendations for any further action (e.g. Good Work or Satisfactory Project with some technical flaws, need to structure the README file more clearly).

8 June 2019

Idea for Scheme Tracker being based on E-commerce. It has products designed for various schemes. For example, a flash drive is designed for IT Projects such as Web Design and Creating an Event for the school.
